

Let's Take A Look At...

Ever spent more time than you intended trying to get a speaker "focussed" where you want it — only to discover next day that it's moved back to where it started ?

With Powerdrive's WHU and WHUM Series you can say good-bye to rotational gremlins for good, thanks to positive-locking features that stand the test of time.

With other "clever touches" like a cable access hole in the laser cut wall plate, the WHU and WHUM mean that you get the job done quicker and smarter.

And who is your customer going to thank — us or you?

The Powerdrive WHU35 & WHUM 35

... a professional bracket for smart thinkers.

Overview

The WHU & WHUM Series are designed for "bottom mounting" speakers that accept a 35mm spigot and weigh up to 40Kg.

The WHU Series, having a longer arm than the WHUM Series, allows speakers to be mounted further away from the wall (see dimensional diagram). Both brackets are manufactured using the highest quality steel and aluminium components and assembled under rigorous conditions to ensure they meet Powerdrive's quality assurance commitments. Brackets are available from stock in Black or White powder coat finish, other colours are available to order dependent on quantity.

Features

- For loads up to 40Kg
- Fits all professional bottom mounting speakers that accept a 35mm spigot
- Tilting 35mm aluminium spigot with internal grub screw securely locks speaker top hat in place.
- Positive locking swivel and tilt mechanism
- Laser-cut wall plate with cable entry access
